

Take advantage of the technology transition.

MECHATRONIC ELEMENT SOLUTIONS SMART SERVICE FOR SMART SYSTEMS

Technologies change, we change. Sometimes quickly, sometimes slowly, but continually. We are currently facing one of these transition periods, both in society and technology.

We're there to support you with large-scale projects and small-scale tasks alike, from planning and commissioning to customer service. We draw on more than 40 years of valuable experience to take you to the next level.

Mechatronic Elements

A trend is emerging towards modular design in the electrical installation of machines and plants. We support this trend and offer manufacturer-independent and system-independent pre-assembled, pre-configured machine elements. You can integrate these into your automation concept as standard components. This enables simplified designs and reduces the number of individual components in your machines and systems. We will help you create fully fledged system solutions for machines and systems using this approach. By reducing the number of parts and suppliers involved, you can focus on furthering your competitive advantage.

Modular engineering elements enable machine set up to become highly cost-effective and easy, which becomes a real

competitive advantage given the shortage of skilled employees. We do not confine ourselves to our own products when putting together these elements and will add components from other manufacturers when it makes sense. Together, by creating smart solutions to develop modular mechatronic elements, we will take your machines and systems to the next level.
